Cisco Route filtering is the basis by which Border Gateway Protocol (BGP) policies are set. There are number of ways to filter one or more networks from a BGP peer, including Network Layer Reachability Information (NLRI) and AS\_Path and Community attributes. This document discusses filtering based on NLRI only. For information on how to filter based on AS\_Path, refer to Using Regular Expressions in BGP. Block One or More Networks From a BGP Peer - Cisco Solved: Hi all, I'm looking to use a Prefix-List and Route-Map for controlling the networks being advertised into BGP, out to an MPLS network. Of course, I could simply do router bgp 65000 network 10.1.0.0 mask 255.255.0.0 network 10.11.0.0

configured by a network administrator. BGP used for routing within an autonomous system is called Interior Border Gateway Protocol, Internal BGP (iBGP). Border Gateway Protocol - Wikipedia BGP uses the network statement in the configuration to identify what networks you wish to advertise from your local networks. BGP then looks in the local routing table and if it finds a network in the routing table that matches the network statement (and matches the mask also) then BGP will advertise it. How to advertise networks in BGP - Cisco Community Cisco software supports multiprotocol BGP extensions as defined in RFC 2858, Multiprotocol Extensions for BGP-4. The extensions introduced in this RFC allow BGP to carry routing
